

How to

How to install VirusBarrier on your computer

(From 1.x to 1.5.1)

<http://www.intego.com>

1) Why this how-to report?

This report has been developed as complementary help to the manual, which is included as a PDF file on your CD Rom. It will guide you step by step with screen captures that will help you to install your new product.

If you wish to have more information concerning our products or send any comments about this report, please send us an e-mail at sales@intego.com or write to:

Intego
6301 Collins Ave
Suite 1806
Miami, FL 33141
Tel: (305) 868 7920
Fax: (305) 868 7938

2) How do I read your manual? I cannot open it with my current version of Acrobat.

Our manuals, FAQ and how-to reports have been written and optimized for Acrobat 3.0 and 4.0 from Adobe. If you have difficulty reading a document or even opening it, it might be because you are using an older version. Download the latest version of Acrobat Reader at:

<http://www.adobe.com/products/acrobat/alternate.html>

How to install VirusBarrier..... 4

How to update VirusBarrier with an update from the web 8

How to uninstall VirusBarrier 9

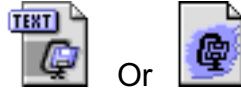

1.1 How to install VirusBarrier

Step 1

- **Web version installation**

Once you have downloaded the program (if you own the web version), you should see a small Stuffit (from Aladdin Software) icon. It is a compressed file that looks like one of the following two pictures.

Double-click on the icon or open this file using Stuffit Expander which is located on your hard-drive then proceed to step 2.

- **CD-Rom version installation**

Insert the CD-Rom in your computers's CD-Rom drive. Proceed to step 2.

Step 2

The following icon will appear on your desktop :

Double-click on it. A window will open containing the installer icon, two manual icons and a read me icon.

Double-click on the VirusBarrier installer icon. When you see this splash screen, click continue.

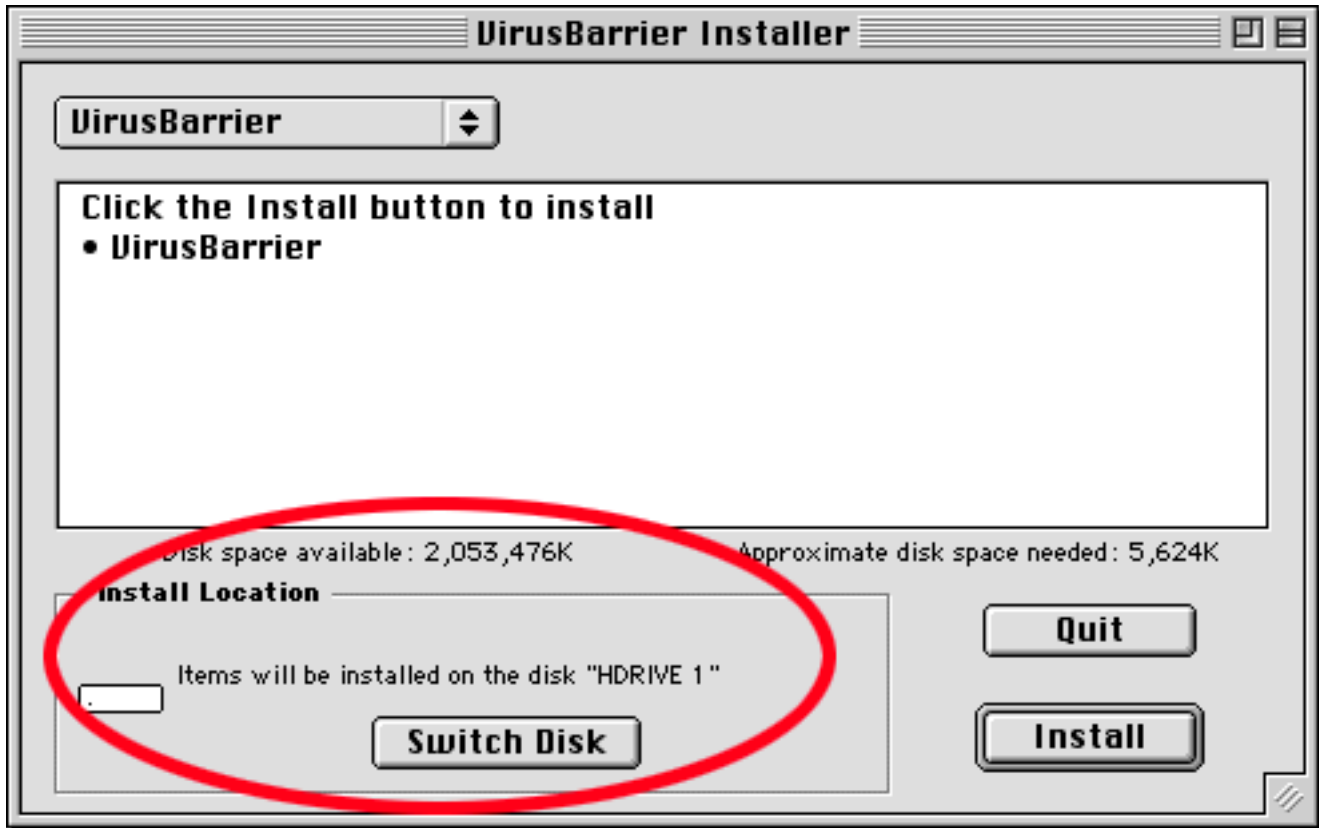

The VirusBarrier license will appear. Read this license carefully, and, if you accept it, click on accept.

You will now see the following window. The default install option is VirusBarrier, which installs both VirusBarrier and NetUpdate. We recommend this installation.

You have the option of installing only NetUpdate. This is for users who have previously installed other Intego products and wish to install a more recent version of NetUpdate.

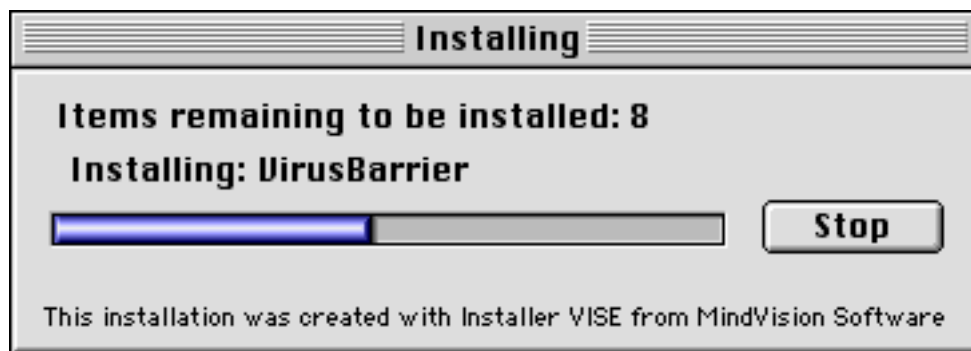

Click install, or choose a new install location (circled in red) and then click install.

During the installation process, a progress bar will be displayed.

When the installation is finished, you will be asked to restart the computer in order to be able to use the new software.

Once you have restarted and your desktop appears, you will see a registration window asking you for your serial number.

This number can be found in your confirmation e-mail from Intego for downloaded software, or on the back of the CD jewel case for CD-Rom versions. It is a 16-digit number separated by dashes and written as shown below.

Please keep your serial number in a safe place as you may need it when you update your software.

Type in the requested information, choose if you would like to start with a full scan or not, then click OK. VirusBarrier is now active.

If you wish to modify your VirusBarrier settings, you may do so by clicking on preferences in the VirusBarrier interface.

How to update VirusBarrier with an update from the web

If you have downloaded an update from our website, proceed as follows:

Before updating:

- your previous version must be installed and enabled in the extension manager,
- you must have your current serial number handy. This number is located either on the CD jewel case or in the confirmation e-mail sent by Intego when you purchase the product.

Our updates can be obtained at :

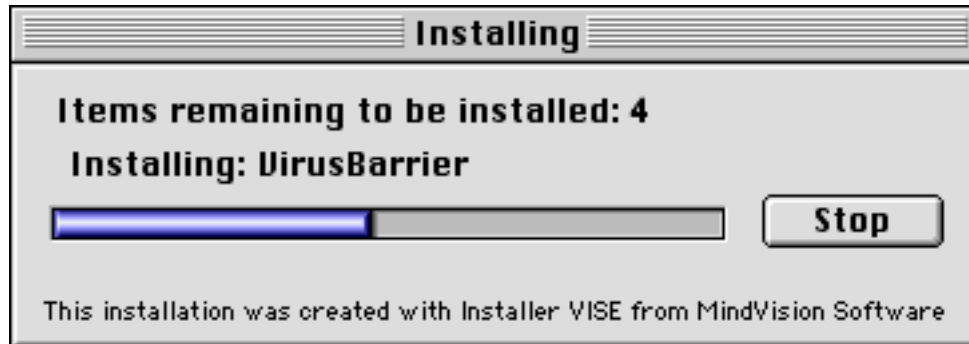

<http://www.intego.com/services/updates.asp>

Once you have downloaded the file and decompressed it with Stuffit Expander, you will see the icon shown below:

VirusBarrier Update 1.xx

Double click on it to launch the installation. The VirusBarrier updater automatically locates the original program on your hard drive and proceeds with updating it.

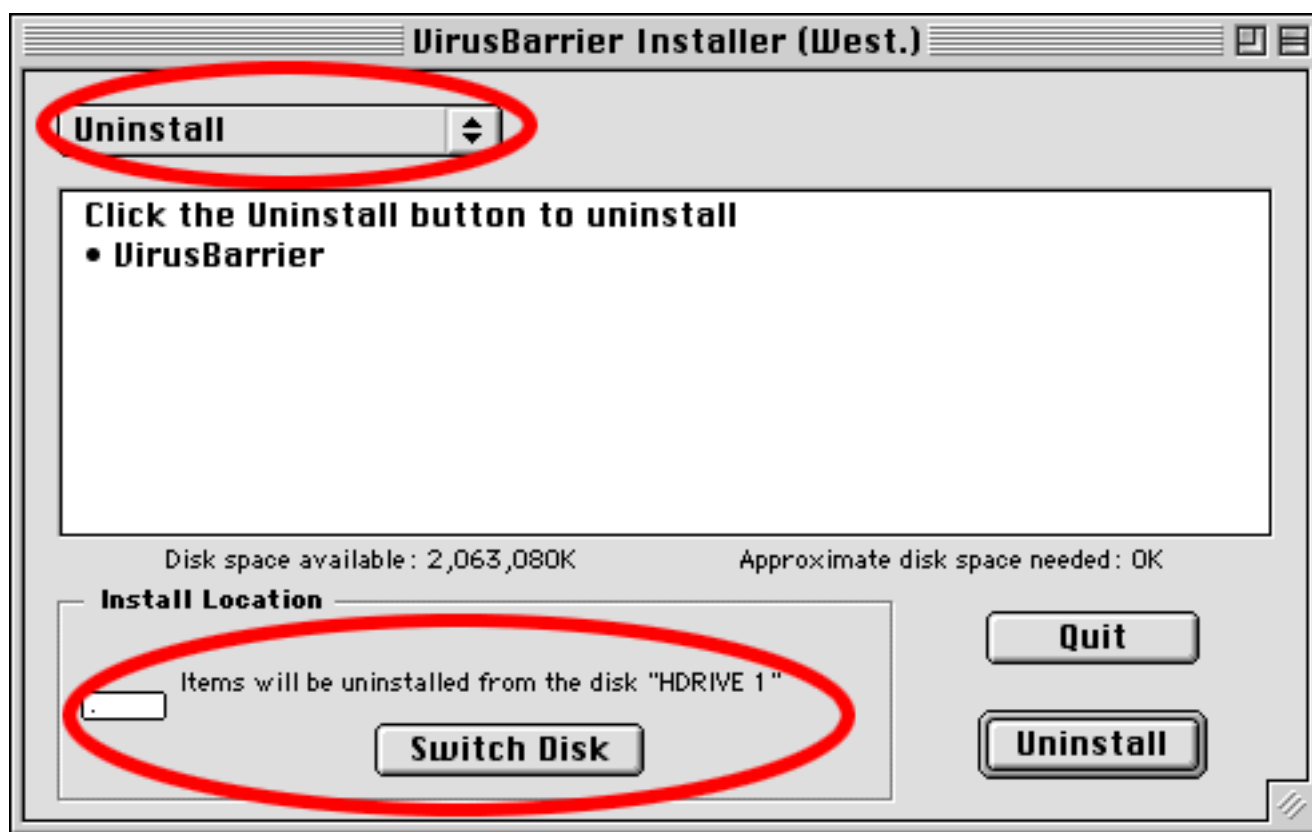

When the update has completed, the install window will close and the new VirusBarrier interface will appear. *Depending on your version, the program may ask you for the serial number after launching VirusBarrier.*

How to uninstall VirusBarrier?

Starting with version 1.5, VirusBarrier contains an uninstall option in the installer. If you wish to uninstall the product, please follow these instructions:

- Double-click on the installer icon, and once the splash screen has appeared, click on continue.
- Select uninstall in the drop-down list as shown on the picture.
- If you have more than one hard disk, verify that the right disk is selected for the program's current install location (usually where your active system folder is located).
- Click on the uninstall button. The program will remove all VirusBarrier and NetUpdate extensions and control panels from your hard drive.

To uninstall versions earlier than 1.5:

- open your hard drive,
- open your system folder,
- open your control panel folder,
- locate the VirusBarrier control panel and drag it into the wastebasket or trash.
